

**Kaminario's R&D Shared Services group is focused on building and developing top-notch automation infrastructure and tools, end-to-end quality assurance, and product interoperability.**

The team focuses on continually enabling the company's development processes - vital for successfully meeting R&D's goals and objectives. With some of the most well-known and respected professionals in the storage industry. Kaminario's Shared

Services team works to continue the integration process, shorten the release cycle, successfully manage risks, and enable a high assimilation of the latest and greatest customer ecosystems.

## About the Team's Focuses

### Automation

Full-blown development process (OOP)

Proprietary development

Sets the framework and tools to make development automatic

CI and CD, covering continuous product regression and increasing functionality

Use latest and greatest DevOps tools ie Jenkins and in-house developments

### Quality Assurance

Constant search for bugs, starting early in the development process

United team that is highly integrated within the scrum teams

Provides end-to-end scenarios from HW to SW based on system knowledge and storage domain proficiency

Holistic QA approach with a proven architecture addressing full product scope

### Interoperability

IT Gurus from end-to-end!

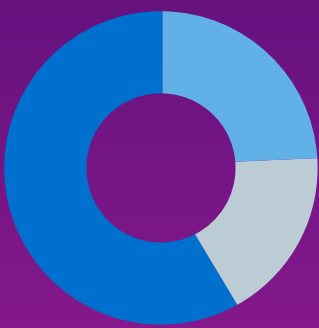

On top of latest market related trends, network protocols, and best practices

Top troubleshooters

Active participation in strategic POCs and Betas

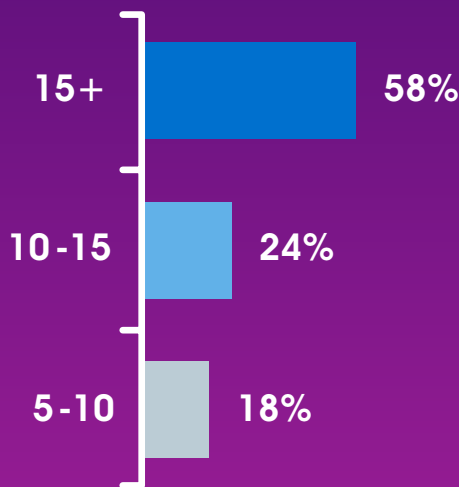

Top contributes to the ability of different operating systems, devices, applications or products to connect and communicate in a coordinated way with Kaminario products
